

Sergey Mikhailov

Junior SOC Analyst / SOC L1 / Security Monitoring Analyst

GitHub | SOC Portfolio | Windows Security Log Triage | IOC Log Enricher

PROFILE

Entry-level SOC analyst focused on Windows Security Logs, Sysmon, incident triage, suspicious PowerShell, RDP investigations, IOC analysis, and security monitoring automation.

I work with practical SOC scenarios: login analysis, process chains, network connections, MITRE ATT&CK mapping, and structured analyst reports. I also build Python/Linux projects, including JARVIS AI Assistant and a commercial Telegram ordering bot.

CORE SKILLS

Windows/Sysmon

Windows Security Logs: 4624, 4625, 4634, 4688; Sysmon: Event ID 1, 3, 11; RDP Logon Type 10 analysis; process creation and command-line analysis.

SOC triage

Noise / suspicious / incident classification; evidence-based log analysis; analyst verdict writing; next checks; recommended actions.

Detection

Suspicious PowerShell detection; Discovery activity detection; persistence indicators; possible lateral movement; basic MITRE ATT&CK mapping.

Automation

Python, PowerShell, Bash; CSV reporting; log parsing; API integration; Git/GitHub; .env/API key handling.

Systems/Network

Linux, Windows, TCP/IP, DNS, HTTP/HTTPS; basic network activity analysis; VPS, nginx, systemd basics.

SOC PROJECTS

Windows Security Log Triage | Repository

PowerShell-based tool for analyzing Windows Security Event ID 4688 and performing initial triage of suspicious process activity.

- Parent Process -> Child Process analysis; suspicious PowerShell flag detection; Discovery command identification; suspicious-only filtering; CSV export; verdict, severity, reason, and triage note fields.

IOC Log Enricher | Repository

Python-based tool for extracting public IP addresses from logs, performing context-aware triage, and enriching indicators with AbuseIPDB reputation data.

- IPv4 extraction; private/local/reserved filtering; indicator frequency counting; context-aware verdict logic; AbuseIPDB API integration; human-readable console report; CSV export.

CASE STUDIES

- Benign Printer Activity - correct benign alert closure without unnecessary escalation.
- RDP and PowerShell Investigation - failed logins -> successful RDP login -> PowerShell activity, verdict: suspicious, context required.
- Office Malware Incident - Microsoft Office -> PowerShell -> Temp script -> external connection -> persistence, verdict: CRITICAL / confirmed incident.

Portfolio: <https://github.com/prodlovely88-ux/soc-portfolio>

ADDITIONAL PROJECTS

JARVIS AI Assistant

Personal AI assistant for Arch Linux / Wayland developed in Python.

- Voice input/wake-word workflow; ASR/TTS integration; LLM API integration; screenshot/vision pipeline; controlled command execution; confirmation logic before risky actions; Linux desktop automation; debugging latency, audio streams, API requests, and local services.

Relevance: Python engineering, Linux automation, API integration, command execution safety, debugging complex multi-file systems.

Commercial Telegram Ordering Bot

Commercial Telegram ordering bot for a coffee shop with ordering workflow, payment integration, and server deployment.

- Telegram bot workflow; menu/cart/checkout; payment integration; webhook processing; VPS deployment; nginx/systemd/domain setup; production scenario debugging.

Relevance: backend logic, API integration, Linux server workflow, deployment and debugging.

PRACTICAL TRAINING

Focus areas:

- Network Fundamentals; Linux for Security; Windows Security Logs; Sysmon; MITRE ATT&CK; SOC triage methodology; Incident reporting; SIEM fundamentals; Detection rules and use cases.

Current focus: SIEM basics, alert triage, detection logic, practical SOC investigations.

ENGLISH

English: Intermediate / B1-B2. I practice writing SOC case reports in English: severity, verdict, evidence, analysis, MITRE mapping, next checks, and recommended actions.

Junior SOC Analyst / SOC L1 / Security Monitoring Analyst. Further development in Blue Team operations, threat detection, incident triage, and security operations.
