

Сергей Михайлов

Junior SOC Analyst / SOC L1 / Security Monitoring Analyst

GitHub | SOC Portfolio | Windows Security Log Triage | IOC Log Enricher

ПРОФИЛЬ

Начинающий SOC-аналитик с практическим фокусом на Windows Security Logs, Sysmon, incident triage, suspicious PowerShell, RDP investigations, IOC analysis и автоматизацию задач мониторинга.

Работаю с SOC-сценариями: анализ входов, цепочек процессов, сетевых подключений, MITRE ATT&CK mapping и analyst reports. Дополнительно развиваю Python/Linux проекты: JARVIS AI Assistant и коммерческий Telegram-бот.

КЛЮЧЕВЫЕ НАВЫКИ

Windows/Sysmon

Windows Security Logs: 4624, 4625, 4634, 4688; Sysmon: Event ID 1, 3, 11; RDP Logon Type 10 analysis; process creation and command-line analysis.

SOC triage

Noise / suspicious / incident classification; evidence-based log analysis; analyst verdict; next checks; recommended actions.

Detection

Suspicious PowerShell detection; Discovery activity; persistence indicators; possible lateral movement; MITRE ATT&CK basic mapping.

Automation

Python, PowerShell, Bash; CSV reporting; log parsing; API integration; Git/GitHub; .env/API key handling.

Systems/Network

Linux, Windows, TCP/IP, DNS, HTTP/HTTPS; basic network activity analysis; VPS, nginx, systemd basics.

SOC-ПРОЕКТЫ

Windows Security Log Triage | Repository

PowerShell-инструмент для анализа Windows Security Event ID 4688 и первичного triage подозрительных процессов.

- Parent Process -> Child Process analysis; suspicious PowerShell flags detection; Discovery commands; suspicious-only filtering; CSV export; verdict, severity, reason, triage note.

IOC Log Enricher | Repository

Python-инструмент для извлечения публичных IP-адресов из логов, context-aware triage и AbuseIPDB enrichment.

- IPv4 extraction; private/local/reserved filtering; frequency counting; context-aware verdict; AbuseIPDB API integration; human-readable console report; CSV export.

CASE STUDIES

- Benign Printer Activity - корректное закрытие benign alert без лишней эскалации.
- RDP and PowerShell Investigation - failed logins -> successful RDP login -> PowerShell activity, verdict: suspicious, context required.
- Office Malware Incident - Microsoft Office -> PowerShell -> Temp script -> external connection -> persistence, verdict: CRITICAL / confirmed incident.

Портфолио: <https://github.com/prodlovely88-ux/soc-portfolio>

ДОПОЛНИТЕЛЬНЫЕ ПРОЕКТЫ

JARVIS AI Assistant

Персональный AI-ассистент для Arch Linux / Wayland на Python.

- Voice input/wake-word workflow; ASR/TTS; LLM API integration; screenshot/vision pipeline; controlled command execution; confirmation before risky actions; Linux desktop automation; debugging latency, audio streams, API requests and local services.

Relevance: Python engineering, Linux automation, API integration, command execution safety, debugging complex multi-file systems.

Commercial Telegram Ordering Bot

Коммерческий Telegram-бот для кофейни с заказами, оплатой и серверным развёртыванием.

- Telegram bot workflow; menu/cart/checkout; payment integration; webhook processing; VPS deployment; nginx/systemd/domain setup; production scenario debugging.

Relevance: backend logic, API integration, Linux server workflow, deployment and debugging.

ПРАКТИЧЕСКОЕ ОБУЧЕНИЕ

Фокус обучения:

- Network Fundamentals; Linux for Security; Windows Security Logs; Sysmon; MITRE ATT&CK; SOC triage methodology; Incident reporting; SIEM fundamentals; Detection rules and use cases.

Текущий этап: SIEM basics, alert triage, detection logic, practical SOC investigations.

АНГЛИЙСКИЙ

English: Intermediate / B1-B2. Практикую написание SOC case reports на английском: severity, verdict, evidence, analysis, MITRE mapping, next checks, recommended actions.

Junior SOC Analyst / SOC L1 / Security Monitoring Analyst. Развитие в Blue Team, threat detection, incident triage и security operations.
